

`document.querySelector(hi)` → echos back:

`<h2> Achievement Tracker </h2>`

`document.querySelector` reads back html elements.

`.nonsense` → null value

`document.querySelector('description').textContent` → Provides the text inside and displays inside console.

`document.querySelector('#Ach-search').value` →

`const title = document.querySelector('h1')` → will return = undefined

`title.textContent`

`title.textContent = 'anything'`

`title.style.color = 'red'`

`document.querySelectorAll('.achievement').length` → this will display how many elements in achievement.  
↓  
This will display a NodeList → 0 and 1

`const cards = document.querySelectorAll('.achievement');`

`cards[0]` → Shows first card

`cards[1]` → Shows second card

`cards[0].textContent` → -1 and shows the inside context.

You can also do `[1].textContent` as well
